- Firebase
- Supabase
- GraphQL
- MongoDB
- PostgreSQL
- Prisma
- Vector Database
- RAG
- Python(Proficient)

WORK EXPERIENCES

Fullstack Developer at Real Advisors

(APR 2025 - FEB 2026)
As a Full Stack Developer using Next.js 14, I'm building an internal application that leverages leading AI providers such as Gemini, DeepSeek, and Claude to generate marketing assets including images, videos, and copy based on brand profiles. These profiles include tone, voice, and other brand-specific traits, making it easier for companies to create AI-powered marketing assistants that align with their identity and messaging.

Fullstack Developer at Automation Contractors

(AUG 2024 - MAR 2025)
This was my first experience as a full-stack developer, where I worked with Next.js and Firebase. I initiated and led the project as the sole developer, handling most of its components, including the dashboards, database models, and other features. The project focused on AI integration, enabling our company to generate automation codes that clients could run locally within their systems.

Frontend Developer at Boolean Review & Automation

(JAN 2024 - JUL 2024)
I leverage my expertise in React, Redux, Node, and Express to deliver high-quality, user-friendly interfaces that enhance our clients' experiences. My primary focus is on the client side, ensuring seamless and efficient user interactions. (https://www.helloboolean.com)

PERSONAL PROJECTS

RECENTS

REACT PERSONAL PROJECTS

- ***Otakus Bazaar***

  E-commerce web application that let user orders anime accessories and the its uses MERN stack.

  Github Repo: https://github.com/earlhansg/otakus-bazaar
